Five things I set up before I ask Claude

For anyone starting a first Claude Code project. Swipe through.

Vaibbhav Sutar

1. A *CLAUDE.md* file

A plain text file in your project.

Claude reads it as each session starts.

Put your rules, folders and goals in it.

2. One *skill*

A SKILL.md file: the steps for one job.
Claude uses it when that job comes up.

Or you call it by name with /skill-name.

3. *Plan* mode

Press Shift+Tab until plan mode is on.

Claude reads first, then writes a plan.

No edits until you approve it.

4. A *memory* file

A new chat starts from zero.

A memory file keeps what it learned.

Ours: one line per lesson, plus a note.

5. *Permissions*

Pick what Claude can run, no asking.

Allow safe commands. Deny risky ones.

Set it once with /permissions.

Set it up once. Stop explaining it in every chat.
